

SUMMARY

Cloud & DevOps Engineer with 5+ years of experience designing, automating, and optimizing multi-cloud infrastructure across AWS, Azure, and GCP. Skilled in Infrastructure as Code (Terraform, CloudFormation), container orchestration (EKS, AKS, GKE), and CI/CD pipeline automation (GitHub Actions, Jenkins, Azure DevOps). Proven track record of improving deployment velocity by 60%, reducing cloud costs by 30%, and maintaining >99.9% uptime through monitoring, observability, and incident response automation. Passionate about scalable system design, DevSecOps practices, and reliability engineering.

SKILLS

- **Cloud Platforms:** AWS (EC2, S3, RDS, Lambda, EKS, VPC, CloudFront, CloudWatch), Azure (VMs, VNet, AKS, Blob Storage, Key Vault, DevOps, NSG), GCP (GKE, Compute Engine, Cloud Storage)
- **Infrastructure as Code (IaC) & Automation:** Terraform, Ansible, AWS CloudFormation, ARM Templates
- **Containerization & Orchestration:** Docker, Kubernetes (EKS, AKS, GKE), Helm
- **CI/CD & DevOps Tools:** GitHub Actions, Jenkins, Azure DevOps, Argo CD
- **Monitoring, Observability & Reliability:** Prometheus, Grafana, Datadog, ELK Stack, PagerDuty, AWS CloudWatch, distributed tracing, APM
- **Incident Management & SRE Practices:** ServiceNow/Jira Service Management, PagerDuty, on-call rotation, postmortem process, SLO/SLI/error-budget monitoring
- **Security & DevSecOps:** IAM, KMS, WAF, HashiCorp Vault, Secrets Manager, Trivy, Snyk, SonarQube, Checkov
- **Artifact Management:** Nexus, JFrog
- **Scripting & Programming:** Python, Go, Bash, PowerShell, YAML
- **Cloud Cost Optimization / FinOps:** Resource rightsizing, tagging governance, budget forecasting
- **Networking & Databases:** VPC, Route 53, Load Balancing, DNS, TLS/SSL, MySQL, PostgreSQL, DynamoDB
- **High Availability & Disaster Recovery:** Failover architecture, DR planning, cross-region replication
- **Collaboration, Processes & Platform Engineering:** Git, GitHub, GitLab, Jira, Confluence, Agile/Scrum platform self-service tooling, GitOps

EXPERIENCE

Self-Employed | Cloud and DevOps Engineer

Nov 2025 – Present

- Built ATS Buddy, a full-stack AI career platform using React 18 + TypeScript, featuring a custom AI Agent Orchestrator integrated with Google Gemini for real-time PDF/DOCX resume parsing and context-aware content generation.
- Architected a production-grade AWS serverless backend using Terraform (modular IaC), provisioning AppSync (GraphQL), DynamoDB, and Lambda, with strict Dev/Prod isolation and reusable environment modules.
- Implemented zero-touch CI/CD pipelines to automate build, deploy, and environment configuration, including SSM Parameter Store synchronization for consistent secrets/config management across environments.
- Hardened application security by deploying AWS WAF protections and rule sets to mitigate common web threats and reduce attack surface for public endpoints.
- Improved operability and cost control by adding CloudWatch observability (logs/metrics/tracing) and enabling Cost Anomaly Detection to proactively identify performance issues and unexpected spend.

University of Louisville | Site Reliability Engineer

Aug 2024 – May 2025 | USA

- Automated multi-regional AWS infrastructure using reusable Terraform modules and GitHub Actions workflows, ensuring environment consistency and reducing provisioning time by 70%.
- Designed and managed secure hybrid AWS infrastructure (VPC, EC2, RDS, S3, CloudFront) to support multi-tier applications, improving scalability and compliance across public and private environments.
- Designed and deployed serverless microservices with AWS Lambda, API Gateway, and DynamoDB; integrated health checks and automated deployments via CI/CD pipelines, achieving 99% uptime under dynamic load.
- Defined SLIs/SLOs and implemented Datadog dashboards and automated alerts, reducing MTTR by 35% through proactive monitoring and incident automation.
- Integrated Amazon Bedrock with existing AWS infrastructure to enable LLM-powered automation for incident resolution and log analysis, improving mean time to recovery (MTTR) by 20%.
- Developed Python and Ansible automation scripts to streamline provisioning, configuration, and deployment workflows, reducing manual intervention by 70% and improving pipeline reliability.
- Integrated Prometheus, Grafana, and CloudWatch with centralized alerting and escalation workflows, reducing incident response times by 40% and enabling faster root-cause analysis.

Tata Consultancy Services | Cloud Engineer**Dec 2021 – July 2023 | India**

- Managed application containerization and delivery using Docker and Azure Container Registry (ACR), implementing image signing and version tagging to reduce deployment inconsistencies by **20%** and enhance environment security.
- Built CI/CD pipelines using AWS CodeCommit, CodeBuild, and CodeDeploy to automate backend service delivery, reducing deployment time by 60% and increasing release reliability.
- Managed and optimized .NET applications on Linux-based servers, handling deployment, performance tuning, and environment configuration to ensure stability and cross-platform compatibility.
- Configured Akamai CDN with AWS CloudFront to optimize caching and routing for global content delivery, reducing latency and improving page load speeds by 45%.
- Configured and deployed 100+ AWS Lambda functions via modular CloudFormation stacks integrated with API Gateway, ensuring scalable handling of 3K+ daily requests.
- Automated multi-environment infrastructure provisioning using Terraform and CloudFormation, reducing manual errors by **35%** and standardizing deployments across DEV, UAT, and PROD environments.
- Integrated Trivy vulnerability scans and IAM policy validation into CI/CD pipelines to enforce compliance and pre-deployment checks, reducing security incidents by 30% and improving audit readiness.
- Led disaster recovery automation by scripting AMI snapshots, RDS backups, and Route 53 DNS failover, achieving 50% faster recovery times (RTO reduction) and improved system resilience.
- Implemented proactive observability using Azure Monitor, Prometheus, and Grafana dashboards to enable real time anomaly detection and reduce system response times by 25% through automated alert workflows.

9acts cloud solutions | DevOps Engineer**Sep 2019 – Dec 2021 | India**

- Assisted with provisioning of AWS EC2, S3, and RDS instances for internal development environments.
- Created basic CI/CD pipelines in Jenkins, automating build and deploy steps for small applications.
- Dockerized internal tools and deployed them using Docker Compose in UAT environments.
- Supported writing and maintaining Bash scripts for server health checks and log cleanups.
- Configured CloudWatch alarms and created dashboards for resource usage tracking and anomaly detection.
- Managed IAM roles and policies for developers using AWS IAM, ensuring secure access to cloud resources.
- Performed regular snapshots and backup validation using AWS native tools.
- Documented system configurations and deployment instructions using Confluence and Jira.
- Shadowed senior DevOps engineers in infrastructure migration efforts and post-deployment verification.

EDUCATION**University of Louisville | Master's in Computer Science****Aug 2023 – May 2025 | USA**
